DVD Photo Slideshow Information

All Slideshows Include:

- Music of your choice to be played during the show
- Interactive Menu
- Transitions
- Three Title Slides
- Your Photos on DVD
- Custom Labeled DVD and Case

Music: Your own choice of music will play as your photos are displayed on the TV screen. You can provide us with your music on CD or in the form of an mp3 or wav file. We can also provide you with your choice of music from our extensive music library for an additional fee. Either way, you will control what music you want playing for your slide show.

Interactive Menu: Each slideshow comes with an interactive menu which makes viewing your pictures more enjoyable. Your menu will display at the beginning of the slideshow. You can build your own menu with the following options:

1. **Background:** You choose what the background picture will look like. Use one of your own pictures or let us provide one for you. Birthday, wedding, anniversary, holiday, vacation. You name it, we have it.
2. **Chapters:** You can have up to 6 picture chapters for each slideshow. You give a name to the chapter, such as Day at the Beach, and once you click on that chapter, the slideshow begins from that point. If that was the second chapter, picture 31 and so on would play. At any point in your slideshow, you can press the menu button on your DVD remote and return to your menu. It is as easy as that!

Transitions: Transitions are used between two pictures. We can give you three options to choose from for your transitions.

1. **Standard Fade:** After viewing your picture for the given time limit, the picture will fade out and the next picture will fade in.

2. **Random Fade:** Included in this option are the standard fade, no fade, dissolve, center in, center out, slide left, slide right and many more. Choosing this option allows many different types of fades which are randomly picked by the digital software program.
3. **None:** No fade will be used with this option. Grover Productions recommends using a standard fade or none. When viewing a picture slideshow you want to concentrate on the photos and not the transitions. **In our experience we have found transitions to be distracting. This is only our opinion.**

Title Slides: Three Title Slides are included in your package. Additional slides can be used for a small fee. Check the order form for the additional fee. Title slides can be used in three ways:

1. A title slide can be used before a group of pictures. The slide will be in a standard black background color and will display your chosen text. Examples include: Happy Birthday, Vermont Vacation, Trip to the Beach, or anything else you would like. Text is limited to a total of 6 words per slide.
2. A title slide can be used with a specific picture. For example, you have a picture of your son in front of his birthday cake. You could include a title that reads Happy Birthday Jimmy. We will try our best to display your text in a readable area of the picture.
3. A title slide can be the very first slide on your DVD before the menu. Once you insert the DVD into your player, the first screen you will see is this title screen. On this screen you can say Happy Birthday, Smith Family Vacation DVD, Merry Christmas---Love John and Sally. Again, you can put anything you want. Text is limited to a total of 6 words per slide. If you do not choose this option, the first screen will be your menu.

Custom Labeled DVD Case and Label: You choose what picture you would like displayed on your DVD case and label. Your picture will be shown on the front of the case along with a title displayed both on the front and side of the DVD case.

Your picture will also be included on your DVD label if you choose. Choose a picture and we will print and apply the picture label to your DVD.

Your Pictures on CD: You have the option of purchasing a CD, complete with all of your scanned pictures. Pictures will be in the jpg format. This is a great way to share and preserve your photos. Also, look at our photo archiving service we provide.

Transfer your DVD Photo Slideshow to VHS: You have the option of transferring your DVD photo slideshow to VHS for an additional fee. You will lose your interactive menu and DVD picture quality. This is a great option for family members who do not have a DVD player. See pricing form for more details.
